HackerOne Proof of Compliance

Teleport engaged HackerOne to provide the platform that hosted Teleport's Bug Bounty Program ("BBP") which included 16 assets within scope of the BBP's Policy Agreement ("Policy") (Table 1). These assets were in Teleport's BBP during the period April 25th, 2022 to February 3rd, 2024 ("Applicable Period"). This report is a confirmation of compliance with multiple international security standards.

During the Applicable Period, 690 reports were submitted to the BBP, of which 50 valid vulnerabilities were identified after triage. 34 of these reports were resolved. 2 vulnerabilities were found to have a Common Vulnerability Scoring System ("CVSS") severity rating of 7.0 or higher. These vulnerabilities represent the greatest risk to Teleport and should be prioritized for remediation. Table 1 displays the in-scope assets and breakdown of findings by severity per asset.
